# SAINTGITS COLLEGE OF ENGINEERING (AUTONOMOUS) 

(AFFILIATED TO APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY, THIRUVANANTHAPURAM)
THIRD SEMESTER B.TECH DEGREE EXAMINATION (S), MAY 2022

## FOOD TECHNOLOGY

(2020 SCHEME)

| Course Code: | 20FTT201 |
| :--- | :--- |
| Course Name: | Principles of Chemical Engineering |
| Max. Marks: | $\mathbf{1 0 0}$ |

Duration: 3 Hours

## PART A <br> (Answer all questions. Each question carries 3 marks)

1. Fructose, $\mathrm{C}_{6} \mathrm{H}_{12} \mathrm{O}_{6}$, is a sugar found in honey and fruits. The sweetest sugar, it is nearly twice as sweet as sucrose. How much water should be added to 1.75 g of fructose to give a 0.125 m solution of Fructose?
2. How many $\mathrm{kg} / \mathrm{hr}$ of sugar syrup with $10 \%$ sugar must be feed to an evaporator to produce 10000 kg .hr of sugar syrup with $65 \%$ sugar.
3. Explain the terms
a) Limiting reactant
b) Excess Reactant
c) Yield
4. How much saturated steam with 120.8 kPa pressure is required to concentrate $1000 \mathrm{~kg} / \mathrm{h}$ of juice from $12 \%$ to $20 \%$ solids at $95^{\circ} \mathrm{C}$ ? Assume that the heat capacity of juice is 4 $\mathrm{kJ} / \mathrm{kg}^{\circ} \mathrm{C}$.
5. Recall Newton's Law of Viscosity
6. Calculate the specific weight, density and specific gravity of two liters of a liquid which weight 15 N
7. Interpret the bernoulli's equation for real fluid.
8. Interpret the Darcy weishback equation.
9. Define efficiency of centrifugal pump.
10. Depict the working principle of rotameter.

## PART B <br> (Answer one full question from each module, each question carries 14 marks) <br> MODULE I

11. A binary mixture consists of $25 \%$ benzene and $85 \%$ toluene are continuously fed to the distillation column at a rate of $2500 \mathrm{~kg} / \mathrm{hr}$. Whereas, the distillate flow rate was $20 \%$ from the feed flow rate. The distillate (top product) contains $75 \%$ benzene. Calculate quantity and compositions of the waste stream.

## OR

12. a) You are asked to prepare a batch of $18.63 \%$ battery acid as follows. A tank of old weak battery acid $\left(\mathrm{H}_{2} \mathrm{SO}_{4}\right)$ solution contains $12.43 \% \mathrm{H}_{2} \mathrm{SO}_{4}$ (the
remainder is pure water). If 200 kg of $77.7 \% \mathrm{H}_{2} \mathrm{SO}_{4}$ is added to the tank, and the final solution is to be $18.63 \% \mathrm{H}_{2} \mathrm{SO}_{4}$, how many kilograms of battery acid have been made?
b) It is required to prepare 1250 kg of a solution composed of $12 \mathrm{wt} \%$ ethanol and $88 \mathrm{wt} \%$ water. Two solutions are available, the first contains $5 \mathrm{wt} \%$ ethanol, and second contains $25 \mathrm{wt} \%$ ethanol. How much of each solution are mixed to prepare the desired solution?

## MODULE II

13. A limestone analyses (weight\%)
$\mathrm{CaCO}_{3} 92.89 \%$
$\mathrm{MgCO}_{3} 5.41 \%$
Inert 1.70\%
By heating the limestone, you recover oxides known as lime.
(a)How many pounds of calcium oxide can be made from 3 ton of this limestone?
(b)How many pounds of $\mathrm{CO}_{2}$ can be recovered per pound of limestone?
(c)How many pounds of limestone are needed to make 1 ton of lime?

## OR

14. a) $1000 \mathrm{~kg} / \mathrm{h}$ of milk is heated in a heat exchanger from $45^{\circ} \mathrm{C}$ to $72^{\circ} \mathrm{C}$. Water is used as the heating medium. It enters the heat exchanger at $90^{\circ} \mathrm{C}$ and leaves at $75^{\circ} \mathrm{C}$. Calculate the mass flow rate of the heating medium, if the heat losses to the environment are equal to 1 kW . The heat capacity of water is given equal to $4.2 \mathrm{~kJ} / \mathrm{kg}^{\circ} \mathrm{C}$ and that of milk $3.9 \mathrm{~kJ} / \mathrm{kg}^{\circ} \mathrm{C}$.
b) How much saturated steam with 120.8 kPa pressure is required to heat 1000 $\mathrm{g} / \mathrm{h}$ of juice from $5^{\circ} \mathrm{C}$ to $95^{\circ} \mathrm{C}$ ? Assume that the heat capacity of the juice is 4 $\mathrm{kJ} / \mathrm{kg}^{\circ} \mathrm{C}$.

## MODULE III

15. a) Differentiate between the simple manometer and differential manometer with neat sketch.
b) A differential manometer is connected a two-point A and B of two pipes as shown in fig. The pipe A contain a liquid of sp.gr. = 1.5 While pipe B contains a liquid $\mathrm{Sp} . \mathrm{gr}=0.9$. The pressure A and B are $1 \mathrm{Kgf} / \mathrm{cm}^{2}$ and 1.80 $\mathrm{Kgs} / \mathrm{cm}^{2}$ respectively. Find the difference in mercury level in differential manometer

## OR

16. Explain the physical properties of fluids and type of fluids with examples.

## MODULE IV

17. Derive Bernoulli's equation from Euler's equation of motion (or) state and explain Bernoulli's equation with assumptions.

## OR

18. a) The water is flowing through a taper pipe of length 100 m and having
diameter 600 mm at the upper end and 300 mm at the lower end, at the rate of 50 litres per second the pipe has slope of 1 in 30 . Find the pressure at lower end. If the pressure at the higher level is $19.62 \mathrm{~N} / \mathrm{cm}^{2}$.
b) At a sudden enlargement of a water main from 240 mm to 480 mm diameter hydraulic gradient rises by 10 mm . Find the rate of flow.

## MODULE V

19. With neat sketches explain the working of a single acting and double acting positive displacement pumps.

## OR

20. Outline the co-efficient of discharge of a venturi meter.
