Course Code		Course Name	L-T-P-Credits	Year of Introduction					
CE303		STRUCTURAL ANALYSIS -11	3-0-0-3	201	6				
Pre-requisite: CE201 Mechanics of Solids									
Course objectives:									
 To equip the students with the force and displacement methods of structural analysis with emphasis on analysis of rigid frames and trusses 									
Syllabus :									
Slope Deflection Method, Moment Distribution Method, Clapeyrons Theorem (Three Moment Equation), Kani's method of analysis, Beams curved in Plan, Plastic Theory									
Expected Outcomes:									
The students will be able to the students wil									
i. analyse structures using force method									
11. ana	analyse structures using displacement method								
iv and	analyse curved beams in plan								
Text Books	s :	fuctures using plustic theory							
1.	Kenne	eth Leet, Chia M Uang & Anne M Gilbert.,	Fundamentals of St	ructural An	alysis,				
	McGr	aw Hill, 4e, 2010		I . D 1	1				
2.	(\mathbf{P}) I t	d 2017	ysis Volume I & II,	Laxmi Pub	lications				
3.	Reddy	y. C.S., Basic Structural Analysis, Tata Mc	Graw Hill, 3e, 2011						
References:									
1.	Daniel L Schodak, Structures, Pearson Education, 7e, 2014								
2.	Hibbeler, RC, Structural analysis, Pearson Education, 2012								
3.	Kinney J. S., Indeterminate Structural Analysis, Oxford & IBH, 1966								
4.	Negi L. S. and Jangid R. S. Structural Analysis, Tata McGraw Hill, 1997								
5.	Rajasekaran S. and Sankarasubramanian G., Computational Structural Mechanics, PHI, 2008								
6.	S.S. Bhavikatti, Structural Analysis II, Vikas Publication Houses (P) Ltd, 2016								
7.	SP:6 (6): Application of Plastic Theory in Design of Steel Structures, Bureau of Indian Standards, 1972								
8.	Timoshenko S. P. and Young D. H., Theory of Structures, McGraw Hill, 2e, 1965								
9.	Utku S, Norris C. H & Wilbur J. B, Elementary Structural Analysis, McGraw Hill, 1990								
10. Wang C. K., Intermediate Structural Analysis, Tata McGraw Hill, 1989									
COURSE PLAN									
Module	~	Contents		Hours	Sem. Exam Marks %				
Ι	Clape	yrons Theorem (Three Moment Equation)	:Derivation of three	7	15				

	moment equation - application of three moment equation for analysis of						
	continuous beams under the effect of applied loads and uneven support						
	settlement.						
II	Slope Deflection Method : Analysis of continuous beams- beams with	7		15			
	overhang- analysis of rigid frames - frames without sway and with sway -						
	different types of loads -settlement effects						
FIRST INTERNAL EXAMINATION							
III	Moment Distribution Method: Moment Distribution method – analysis	7		15			
	of beams and frames – non sway and sway analysis .						
IV	Kani's Method: Kani's Method of analysis applied to continuous beams	1.1					
	and single bay single storey rigid frames rigid frames - frames without			15			
	sway and with sway.						
SECOND INTERNAL EXAMINATION							
V	Beams curved in plan: Analysis of cantilever beam curved in plan,		7	20			
	analysis of circular beams over simple supports.		/ 20	20			
VI	Plastic Theory: Introduction – plastic hinge concepts – plastic modulus –						
	shape factor – redistribution of moments – collapse mechanisms –			20			
	Plastic analysis of beams and portal frames by equilibrium and	8 20					
	mechanism methods.(Single Storey and Single bay Frames only)						
END SEMESTER EXAMINATION							

QUESTION PAPER PATTERN (End semester exam)

Maximum Marks :100

Exam Duration: 3 Hrs

Part A -Module I & II : 2 questions out of 3 questions carrying 15 marks each

Part B - Module III & IV: 2 questions out of 3 questions carrying 15 marks each

Part C - Module V & VI : 2 questions out of 3 questions carrying 20 marks each Note :

14

1. Each part should have at least one question from each module.

2. Each question can have a maximum of 4 subdivisions (a, b, c, d)
