# Linear Algebra and its Applications

THIRD EDITION

David C. Lay

ALWAYS LEARNING

PEARSON

# Table of Contents

*(Supplementary Exercises are featured at the end of each chapter.)*

## **1. Linear Equations in Linear Algebra.**

Introductory Example: Linear Models in Economics and Engineering.  
Systems of Linear Equations.  
Row Reduction and Echelon Forms.  
Vector Equations.  
The Matrix Equation  $Ax = b$ .  
Solution Sets of Linear Systems.  
Applications of Linear Systems.  
Linear Independence.  
Introduction to Linear Transformations.  
The Matrix of a Linear Transformation.  
Linear Models in Business, Science, and Engineering.

## **2. Matrix Algebra.**

Introductory Example: Computer Graphics in Aircraft Design.  
Matrix Operations.  
The Inverse of a Matrix.  
Characterizations of Invertible Matrices.  
Partitioned Matrices.  
Matrix Factorizations.  
The Leontief Input-Output Model.  
Applications to Computer Graphics.  
Subspaces of  $R^n$ .  
Dimensions and Rank.

## **3. Determinants.**

Introductory Example: Determinants in Analytic Geometry.  
Introduction to Determinants.  
Properties of Determinants.  
Cramer's Rule, Volume, and Linear Transformations.

## **4. Vector Spaces.**

Introductory Example: Space Flight and Control Systems.  
Vector Spaces and Subspaces.  
Null Spaces, Column Spaces, and Linear Transformations.  
Linearly Independent Sets; Bases.  
Coordinate Systems.  
The Dimension of Vector Space

Rank.

Change of Basis.

Applications to Difference Equations.

Applications to Markov Chains.

### **5. Eigenvalues and Eigenvectors.**

Introductory Example: Dynamical Systems and Spotted Owls.

Eigenvectors and Eigenvalues.

The Characteristic Equation.

Diagonalization.

Eigenvectors and Linear Transformations.

Complex Eigenvalues.

Discrete Dynamical Systems.

Applications to Differential Equations.

Iterative Estimates for Eigenvalues.

### **6. Orthogonality and Least-Squares.**

Introductory Example: Readjusting the North American Datum.

Inner Product, Length, and Orthogonality.

Orthogonal Sets.

Orthogonal Projections.

The Gram-Schmidt Process.

Least-Squares Problems.

Applications to Linear Models.

Inner Product Spaces.

Applications of Inner Product Spaces.

### **7. Symmetric Matrices and Quadratic Forms.**

Introductory Example: Multichannel Image Processing.

Diagonalization of Symmetric Matrices.

Quadratic Forms.

Constrained Optimization.

The Singular Value Decomposition.

Applications to Image Processing and Statistics.

Appendices.
