

The background of the cover is a close-up, high-angle photograph of a microprocessor die. The die is a square silicon chip with a complex grid of circuitry, including various colored regions (green, yellow, blue) and numerous small, dark rectangular components. The lighting creates a strong perspective, with the top-left corner being brightly lit and the bottom-right corner being in shadow.

MICROPROCESSORS AND INTERFACING

DOUGLAS V HALL

3e

Contents

1. An Overview of Computers and Microprocessors
 2. 8085 and 8086 Microprocessor Architectures
 3. 8086 Family Assembly Language Programming—Introduction
 4. Implementing Standard Program Structures in 8086 Assembly Language
 5. Strings, Procedures, and Macros
 6. 8086 Instruction Descriptions and Assembler Directives
 7. C, A High-level Language for System Programming
 8. Semiconductor Memories and Interfacing
 9. Input and Output Modes and Interfacing
 10. Digital Interfacing
 11. Analog Interfacing and Industrial Control
 12. Microcomputer System Peripherals
 13. Computer System and Peripheral Buses
 14. Data Communication Interfaces
 15. The 80286, 80386 and 80486 Microprocessors
 16. An Introduction to the Pentium Processors
- Appendix A ---- Intel manual on 8086 Microprocessor
- Appendix B ---- 8086/8088 Instructions
- Appendix C ----- The SDK -86
- Appendix D ----- Multimedia Technologies
- Appendix E -----Lab Assignments
